

PREPARATION GUIDE

This preparation guide is meant for Bed Bug infestations.

BEFORE TREATMENT

- 01 Move any items/ furniture 4-6 inches away from the walls so that the baseboard is accessible.
- 02 Remove all bedsheets, pillow cases and blankets from the bed.
- 03 Lift up mattresses and box springs and place them on their sides. If your mattress/ box spring is still in its plastic, remove that as well and discard it.
- 04 Launder bedsheets, pillow cases, furniture covers, blankets, drapes and any clothing found on the ground using the hottest setting on your washing machine. Dry in a dryer using the highest heat setting.
- 05 Vacuum the floor thoroughly and discard the contents collected by the vacuum in your garbage bin outside. This should be done routinely as well even after the treatment.
- 06 Be ready to leave your residence for 4-6 hours upon our arrival. This ensures that any pesticide we apply has dried up before re-entry.

AFTER THE TREATMENT

- 01 Open up windows to ventilate the home/business for at least 30 minutes.
- 02 Do not use a wet mop against the baseboard or treated areas.
- 03 Buy & install bug proof mattress/ box spring covers.
- 04 Be patient as the treatment can take some time to show results.

Your full cooperation is necessary in order to achieve efficient results.
